Interpreting asymptomatic bacteriuria

An editorial oversight while finalising the proofs of this Practice article by Martin Cormican and colleagues (*BMJ* 2011;343:d4780, doi:10.1136/bmj.d4780) led to the omission of the important prefix “non.” In the second paragraph of the “Avoidance of testing” section the fourth sentence should have

started: “Treatment of asymptomatic bacteriuria is not recommended in non-pregnant women [not “pregnant women”] of any age.”
