

CORRECTIONS

Increasing confusion in a man after a fall—just a head injury?

An error occurred in the units for serum creatinine in the online version of this Endgames article by K Birdi and colleagues (*BMJ* 2011;343:d4806, doi:10.1136/bmj.d4806). The units are correct in the question section, but in the answer section (in the box

titled “Diagnostic criteria for the different forms of myeloma”) they should be $\mu\text{mol/L}$ [not mmol/L as we published].
