### Effect of quadrivalent HPV vaccination on HPV related disease in women treated for cervical or vulvar/vaginal disease

In the fourth paragraph of this Editorial by Jane J Kim (*BMJ* 2012;344:e1544, doi:10.1136/bmj.e1544), it should be noted that disease prevented may have also resulted from an anamnestic response generated by the vaccine in women who

had cleared prior vaccine-type infections. This effect has also been observed in previous studies.
