Screening tests: indices of performance

Mistyping led to a mistake in the final option (d) of this Endgames statistical question by Philip Sedgwick (*BMJ* 2011;342:d3763, doi:10.1136/bmj.d3763). It currently reads

$(294/(34+2)) \times 100\% = 99.3\%$, but it should read $(294/(294+2)) \times 100\% = 99.3\%$.
