CORRECTIONS

A student with macrocytic anaemia

Owing to an editing error, the short answer to question “2” in this Endgames quiz (*BMJ* 2014;348:g3099, doi:10.1136/bmj.g3099) contains an inaccuracy. This answer should have read: “In view of her diet and short history, folate or vitamin B12 deficiency, with folate deficiency [not “vitamin B12 deficiency”]

being the most likely.” This error was corrected for the print version of the article.
