Unnecessary PCIs and other stories ...

Minerva got her sums wrong in the first item of her column (*BMJ* 2015;350:h2632, doi:10.1136/bmj.h2632), and the risk of an ischaemic or haemorrhagic stroke at the time of percutaneous coronary intervention is 1.3 per thousand

procedures rather than the 13 per thousand stated. (However, the main point still stands despite the lower risk figure.)
