Rapid Knowledge
Flexible online education and training

Build and manage your own education and training programmes from our catalogue of over 400 courses covering clinical, professional development, personal skills and research.

bmj.com/company/rapidknowledge
User survey results show that **99% of healthcare professionals** felt the courses helped them to improve patient care, and **98% feel more confident** in their clinical practice as a result of using them.¹

Select courses for your needs

We have worked closely with students, junior doctors, nurses, clinicians and researchers since 2003 to produce high-quality, evidence-based online learning.

With hundreds of courses to choose from you can select the perfect package to meet your needs; whether you are building a new programme, or looking for courses to complement your current offering.

Covering key conditions across primary and secondary care, courses are continuously updated and offer a reliable and effective way to support your organisation in delivering high quality online learning.

Challenges in hospital care: Sepsis - recognition and management in adults

“It was of real benefit. I attended this module with academic knowledge about what sepsis really is, but after completing this marvellous module, I gained vast information about how to suspect, diagnose and manage sepsis using scientifically based logarithms.”

Medical Student, Egypt

---

Induction and preparing for working on the wards

Essential training in key competencies which will teach new skills, increase confidence, and improve patient satisfaction and quality of care.

Priority clinical conditions

Cover recognition, assessment and management of common, high-priority clinical areas for hospitals and educate on how to deal with these increasingly complex and costly demands.

Interpreting tests

Educate using a mixture of 3D animation, audio, images, text and clinical cases with practical tips on how to conduct, interpret and record key tests.

Safer prescribing

Reduce risks and support consistent prescribing by offering practical approaches to avoiding errors and working safely and effectively.

---

ECG skills: bradycardia

“Very good overview and excellent in the way it links in clinical significance.”

Specialist/Consultant, New Zealand

---

Airways management: tracheal intubation

“A good refresher, excellent COVID-19 additional information and best practice highlights.”

Nurse, Australia

---

“Developing a good research question

“I think that the first step that should be done in clinical research is knowing how to ask a good research question. The module is excellent and makes it very clear how to build a good research question. Having this first objective, the second will be to write a good protocol.”

Paediatrician, Mexico

---

Motivational interviewing in brief consultations

“Thank you for a succinct and well constructed module. The videos illustrate the key points with clarity.”

GP/Family Physician, United Kingdom

---

“Challenges in hospital care: Sepsis - recognition and management in adults

“It was of real benefit. I attended this module with academic knowledge about what sepsis really is, but after completing this marvellous module, I gained vast information about how to suspect, diagnose and manage sepsis using scientifically based logarithms.”

Flexible content delivery

BMJ’s collection of online courses can be simply delivered as a SCORM export to seamlessly integrate into your own Learning Management System (LMS).

Benefits include:

+ Select the most appropriate courses at the appropriate time with the ability to change your package throughout the year
+ Provide access to your educational materials and resources all in one place, with access from anywhere
+ Save time and money producing and maintaining your own online learning by providing trusted content written by experts
+ Course content is continually updated and seamlessly delivered to your LMS to reflect guideline changes and the latest evidence
+ Actively mandate and manage learning and track progress
+ Allows your LMS to read, run, and report on course activity with data feeding into your own reporting system.

“When you start the module, there are pre-questions and real-life case scenarios, which I can apply to my clinical practice and teaching. This is what I like about BMJ Learning. All the information is evidence-based with references. As we teach students, we have to speak with evidence.”

Dr Le Dai Duong, Doctor at Geriatric & Palliative Care Ward and Education coordinator
University of Medicine and Pharmacy, Ho Chi Minh City
