<b>BMJ Transformative Journal Targets</b>																	
		2020 Year 0 data				2021 Year 1 data				2022 Year 2 OA Target	Information on usage comparing subscription and OA content					tent	
Name of journal		of research articles published	previously]	penetration		of research articles	Total number of research articles published Open Access CC BY in 2021	penetration	met [Yes	has a TJ exception	(% of content published OA)	Average number of citations for subscription articles published in 2021	Average number of downloads for subscription articles published in 2021	citations for OA CC- BY NC articles	Average number of downloads for OA CC- BY NC articles published in 2021	citations for OA CC BY articles published	Average f number of downloads - for OA CC- s BY articles published in 2021
A note on the data																	
Research vs non-research: Plan S supports the transition of research content to open access. Many BMJ journals contain multiple content types, for example, education, narrative reviews, opinion pieces and editorials. The number of Articles Published is only for the research article component of a given journal.									Open access types - CC BY vs CC BY NC: Plan S requirements to transition to open access are based upon research articles being made available upon a Creative Commons CC BY licence. BMJ's standard licence is a Creative Commons CC BY NC licence, except where a funder, such as Wellcome, mandates. To meet Plan S requirements, the table reports on articles with CC BY licences only. The total amount of open access content in a journal (CC BY + CC BY NC) is likely to be higher than stated.								
Citation data: Citation data is from Dimensions.										Usage data: Usage data is from Google Analytics.							
Transformative Journal targets are based upo journal in 2021. Target numbers are given for article.
