

Working together to create better health systems

<u>Partner with us</u> to elevate your agenda and address the most pressing issues in global health and beyond

Driving impact in global health through partnerships

BMJ is a global healthcare knowledge provider and publisher of one of the world's top five general medical journals, The BMJ. Our vision of a healthier world drives what we do. By sharing knowledge and expertise, we help improve patient outcomes through better evidence, decisions, and systems.

The BMJ Events and Partnerships team (BMJx) connects experts to share and compare knowledge through large and smaller-scale events, webinars, roundtables, and editorial BMJ Collection series.

Our highly skilled and connected team supports corporations, foundations, multilateral organisations, non-governmental organisations and governments in creating impact across critical global themes.

These themes extend beyond healthcare to sustainability, poverty reduction, gender and health inequalities, and the changing shape of academic research.

- Bespoke published supplements and themed topic collections
- Convened high-level roundtable and policy dialogue discussions
- Accredited learning modules
- Global and localised interactive webinars, workshops, and virtual or in-person events
- Compelling podcast series, video summaries and explanatory infographics

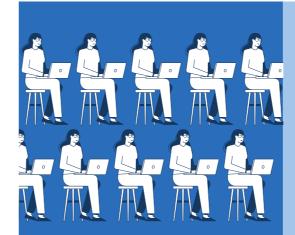

- Curated media and digital marketing campaign production and dissemination
- Specialised translation services
- Public engagement summaries and patient leaflets
- Concise policy recommendations
- News release drafting and dissemination to generate media coverage worldwide

"BMJ has very good people on the ground. They made it happen, and it worked."

Dr Luis Gabriel Cuervo, Senior Advisor for a leading international organisation specialising in health, on why he chose BMJ to publish the BMJ Innovations *Social Innovations in Health* special supplement.

Curate a BMJ Collection of articles to draw attention to neglected issues and stimulate needed debates

Draw on our community of 80+ expert journal editors and 65 specialty journals

Receive concise summaries of the collection content, identifying the policy options and highlighting recommendations

000

unbiased, peer-reviewed and evidence-based outputs

Tap into our vast network

that provides expert-led,

Have a dedicated professional editor handle all your collection articles

Bridge the gap between scientific research and its use within clinical and policy settings

Benefit from our web reach of 3 million+ users per month

Leverage BMJ's 2M+ collective reach of social media followers across Twitter, Facebook, LinkedIn and Instagram

Benefit from a service that coordinates language and presentation across different papers within one collection

Include patients and people

with lived experience in the

dialogue

Choose how to showcase your impact, from peer-reviewed articles to video content

Generate interest and leads, and connect with key influencers and policy and senior decision-makers

Find a home for your research within our 67+ specialty journals

> Deliver outputs to the right audience

Improving health outcomes worldwide

Helping to influence health policy in peru

A special collection on social innovations in health published by BMJ in 2022 showcased the Mamás del Río programme that helps community workers adapt to a new clinical setting within a post-pandemic context. The Peruvian Health Minister is considering the evidence provided in the paper to inform a policy change that will formalise the programme throughout the region as part of the national health system.

Delivering large scale programmes

BMJ recently orchestrated a symposium series for Johnson&Johnson China that brought together hospital chief executives and presidents worldwide to discuss leadership, and how to maintain quality and safety in their hospitals.

The programme attracted 16,000 delegates across the Chinese, English, and Spanish speaking webinar channels.

Our privileged networks and global footprint meant we could bring together the most innovative and influential hospital leaders today, including Tomislav Mihaljevic, President and CEO of the Cleveland Clinic, USA and Steve Swensen, Professor, Mayo Clinic, USA.

Mobilising institutional health partnerships

On behalf of the UK Foreign and Commonwealth Office (FCO), BMJ facilitated an interactive workshop for 8 countries. BMJ brought together top health officials and experts from the UK and the majority of partner countries, to share best practices, facilitate learning, and create a stronger network across the Better Health programme. Together they addressed the often overlooked growing burden of non-communicable diseases and strengthen local health system structures, processes, governance, regulation, and capabilities to drive improvements in quality of care. As a tool primarily for health system strengthening, the programme was designed to enable collaboration and facilitate debate on technical solutions to health challenges which many countries are facing simultaneously.

Creating dialogues that shape frameworks and inform policies

In 2022, BMJ supported the World Health Organization (WHO) and the National Academy of Medicine (NAM) in calling for social media companies to adopt global principles for credible health information. BMJ convened 15 global health experts to review the principles outlined in a NAM paper, which gained media attention in Latin America. The call led to action from digital media companies, including YouTube, which enhanced its policy on safe abortions.

Continuing professional development systems

BMJ has used its expertise in health system strengthening, continuing medical education (CME) and continuing professional development (CPD) to support governments in developing robust systems to support the ongoing medical education of frontline professionals.

The availability of BMJ's resources in Azerbaijan, Georgia and Ukraine ignited a demand for evidence-based medical information and reinforced the recognition that a formalised system of professional development is essential. We provided each government with advice, resources, and examples of international best practice to guide their decision making.

BMJ Collections are articles drawing attention to key priorities, neglected issues or needed debates within various global health and medicine areas.

They are often developed in collaboration with international organisations to influence policy and decision-making. These programmes align with our vision to create a healthier world and are further strengthened through partnerships with academic, bilateral, multilateral, and non-governmental organisations who share our passion for improving global health.
