### Could routine cardiocography reduce long term cognitive impairment?

Christoph Lees, one of the authors of this Analysis article by Charlotte Dyson and colleagues (*BMJ* 2011;342:d3120, doi:10.1136/bmj.d3120), is visiting professor at the Katholieke Universiteit in Leuven (not the Kathalieke Universitiet as we

misspelt it in the print version). Lees advised us of this affiliation after the online version of his article had been published.
