## Frequency and risk factors for prevalent, incident, and persistent genital carcinogenic human papillomavirus infection in sexually active women: community based cohort study

The authors of this Research paper (*BMJ* 2012;344:e4168, doi:10.1136/bmj.e4168) want to amend two misleading column headings in table 1. The first heading under “Incidence (new infection at follow-up)” should have been: “No (%) infected of 821 women tested.” The first heading under “Persistence or

redetection (same HPV type at follow-up)” should have been: “No (%) infected of women with specific HPV type at baseline.”
