# Clinical characteristics of 113 deceased patients with coronavirus disease 2019: retrospective study

OPEN ACCESS

In the fourth paragraph of the results section of this paper by Chen and colleagues (*BMJ* 2020;368:m1091, doi:10.1136/bmj.m1091, published 26 March 2020), the percentage of deceased

patients who had percutaneous oxygen saturation of 93% or below on admission should be 64% [not 4%].
