## MANDATORY COVID VACCINATION FOR HEALTHCARE WORKERS

### Mandatory covid-19 vaccination for healthcare workers: vaccinated and unvaccinated people seem as likely to infect others

Stephen Porter *consultant obstetrician and gynaecologist*

Sokol's main argument for mandatory covid-19 vaccination of healthcare workers is that vaccination of patient facing healthcare workers protects patients.<sup>1</sup> The author makes this claim based on a health department study from Australia.<sup>2</sup>

A recent study in *Lancet Infectious Diseases* suggests, however, that those vaccinated who subsequently become infected are just as likely to infect those around them as unvaccinated people who develop covid.<sup>3</sup> This does somewhat weaken the argument for mandatory vaccination of healthcare workers as a means of protecting patients.

The best way to protect patients is for all patient facing healthcare workers to have mandatory weekly testing. Demonstrating a lack of infection will surely provide better patient protection than a passport that indicates vaccination at some point in the past.

Competing interests: none declared.
