Correction

In this article (*BMJ* 2023;380:e073488 doi:) the authors state “ α -blockers such as clonidine and α -methyldopa, which can help with tachycardia caused by the catecholamine surge on standing.” The authors were actually referring to central adrenergic inhibitors such as clonidine and α -methyldopa, so that the corrected sentence reads “Central adrenergic inhibitors such as clonidine and α -methyldopa, which can help with tachycardia caused by the catecholamine surge on standing.” The article infographic has been amended accordingly.
