Telegram address: The telegraphic address of the Editor of the British Medical Journal is HOBSON, London. The telegraphic address of the Manager of the British Medical Journal is HOBSON, London.

OF QUERIES, ANSWERS, AND COMMUNICATIONS relating to subjects which special interest in the British Medical Journal are devoted will be found under their respective headings.

QUERIES.

J. P. asks for information as to the treatment of tapeworm in a child of 6 months old. She has passed the segments twice in the last eight weeks. She is a rather weaklly infant, but has been steadily improving in health for the last two months.

TREATMENT OF ACNE ROSSA.

M. writes: I have a patient—a young lady—who has suffered from a gradually increasing acne rosacea. I think the case is one which seems to accord with the form to which Miss Halmanno-Squire has given the name of vespertilio. There are irregular triangular patches on each cheek, a few spots between the eyebrows, and the end of the nose is very red, swollen, and vascular. Acneform pimpls often form here, which I have incised, and the flow of dark thick blood is astonishing. I should like to know if any member of the Society has a plan of treatment. I have greatly improved the cheeks, but I have been rather afraid of meddling with the nose.

ANSWERS.

INQUIRER.—We are informed that the report of the Committee is being prepared for publication, and it is expected that it will have been published by the end of the year.

E.—We do not think that our correspondent would be justified in issuing the advertisement which he submits.
