Corrections

Cerebrotendinous Xanthomatosis

In the Medical Memorandum by Dr. A. Stewart Truswell and Dr. Peter J. v. S. Pfister (5 February, p. 353) we regret that a line was inadvertently omitted. The second and third lines of the third paragraph of the Case Report should have read "... she could speak some English and Afrikaans and was simple and childish—I.Q. 50. There was a dense cataract in the left eye and asteroid hyalitis in the right eye."

Vaccination against Rubella

Dr. Philip T. Penny and Dr. John V. S. Pether have asked us to make the following corrections in their letter (5 February, p. 375). In the second paragraph, lines three and four should read "... assess the haemagglutination-inhibition (H.A.I.) antibodies of nurses . . ." Line five should read "Nurses with an H.A.I. titre . . ."
