Research in General Practice

Managing thyroid illness: a trainee group project

J M HOWE, A J M BUTT

One of the aged objectives of a general practice is to train new doctors. This has led to the realisation that there will not be new doctors to replace those who are already in the practice, and that some of the older doctors may have to be replaced. The training of new doctors has been considered as a group project, and the trainees have been given the opportunity to work together. This paper describes how the trainees have worked together.

What we did

The trainees had to write a project on the problem of thyroid illness. They had to study the problem, and to write a report on the problem. The report was to be evaluated by a panel of experts. The panel was to be made up of doctors who had experience in the field of thyroid illness.

We found

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of thyroid illness. The trainees had to be trained in the methods of investigation and treatment of other problems as well.

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

What we conclude

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now conclude

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.

We now present

The trainees had to be trained on the problem of thyroid illness. They had to be trained in the methods of investigation and treatment of other problems as well.
