Posterior circulation ischaemic stroke

This Clinical Review contains two errors (BMJ 2014;348:g3175, doi:10.1136/bmj.g3175). In the first sentence of the section “What treatment is recommended after posterior circulation stroke?” the blood pressure target should have read “less than 140 mm Hg/80 mm Hg,” rather than “less than 80 mm Hg/140 mm Hg.”

Secondly, in the table, along the “Quadrantanopia” row it should have read + under the “Anterior circulation” column and ++ under the “Posterior circulation” column.
