The surgeon solving violent crime with data sharing

We have amended this article (*BMJ* 2020;371:m2987, doi:, published 14 October 2020) to remove the sentence, “And a recent study looking to replicate the model in the southeastern US found that, for every \$1 (78p; €0.85) spent, the Cardiff model would save \$15 in the health system and \$19 in criminal justice.”

The US Centers for Disease Control and Prevention (CDC) has clarified that it did not perform a separate cost-effectiveness evaluation, just a process evaluation. The figures in the removed sentence were in the report but were a conversion from the UK model figures appearing in the Florence et al paper cited in this article as reference 6.
