What is my covid risk?

In this 10-Minute Consultation by Samuel Finnikin and David Spiegelhalter (*BMJ* 2021;372:n637, doi:), the table of estimated covid-19 mortality wrongly gave a ~1 in 8 chance of dying for a man with a “covid age” of ≥ 85 . It should have stated a 1 in 17 chance of dying. The online version has now been corrected.
