A living WHO guideline on drugs for covid-19

This living guideline by Arnav Agarwal and colleagues (*BMJ* 2020;370:m3379, doi:) was last updated on 22 April 2022, but the infographic contained two dosing errors: the dose of ritonavir with renal failure should have read 100 mg, not 50 mg; and the suggested regimen for remdesivir should have been 3 days, not 5-10 days. The infographic has now been corrected.
