Update to living WHO guideline on drugs for covid-19

This living guideline by Agarwal and colleagues (*BMJ* 2020;370:m3379) has been updated. For the latest update, visit doi:. The latest version of this WHO living guidance has the following changes:

Recommendations are now ordered by severity of covid-19, and patients stratified into those at low, moderate, or high risk for hospitalisation. New recommendations were added for moderate risk of hospitalisation for nirmatrelvir/ritonavir, and for moderate and low risk of hospitalisation for molnupiravir and remdesivir. New evidence was included for nirmatrelvir/ritonavir and molnupiravir, supporting existing recommendations for patients at high risk of hospitalisation. The recommendation against ivermectin was updated with additional trial evidence. A new recommendation was made against the antiviral agent VV116.
