

Appendix 1. Sample of the standardized electronic data extraction sheet

Survey's Title						
Please specify your survey's title in the first box below:						
Calendar year(s) of data collection						
Please specify your survey's calendar year(s) of data collection [e.g., 1990-91] in the first box below:						
Total Energy Intake (kcal/day)						
Metric (please specify your survey's definition in the first box below):						
Measurement unit (please specify your survey's unit of measurement in the first box below). If servings are used, please specify the serving size (i.e., grams per serving). For energy-adjusted estimates, please also mention your method for energy-adjustment:						
Overall mean/ SD intake for whole population (men and women combined):						
	Sample size	Mean intake	Standard deviation of intake			
whole population (men and women combined)						
Age_range	Males			Females		
	Sample size	Mean intake	Standard deviation of intake	Sample size	Mean intake	Standard deviation of intake
Overall (all ages)						
20 – 24 years						
25 – 34 years						
35 – 44 years						
45 – 54 years						
55 – 64 years						
65 – 74 years						
75 – 84 years						
85+ years						

Fruits (g/day)

Please note that ideally we would like the summary measures (i.e. mean and standard deviation) of intake for fruits and vegetables separately, excluding juices and starchy vegetables like potatoes, corn and ect.

Metric (please specify your survey's definition in the first box below):

Measurement unit (please specify your survey's unit of measurement in the first box below). If servings are used, please specify the serving size (i.e., grams per serving). For energy-adjusted estimates, please also mention your method for energy-adjustment:

Overall mean/ SD intake for whole population (men and women combined):

	Sample size	Mean intake	Standard deviation of intake			
whole population (men and women combined)						
	Males			Females		
Age_range	Sample size	Mean intake	Standard deviation of intake	Sample size	Mean intake	Standard deviation of intake
Overall (all ages)						
20 – 24 years						
25 – 34 years						
35 – 44 years						
45 – 54 years						
55 – 64 years						
65 – 74 years						
75 – 84 years						
85+ years						

Vegetables (g/day)

Please note that ideally we would like the summary measures (i.e. mean and standard deviation) of intake for fruits and vegetables separately, excluding juices and starchy vegetables like potatoes, corn and ect.

Metric (please specify your survey's definition in the first box below):
