PRIOR Checklist

(Gates M, Gates A, Pieper D, et al. Reporting guideline for overviews of reviews of healthcare interventions: development of the PRIOR statement. *BMJ* 2022;378:e070849. doi:10.1136/bmj-2022-070849.)

Section Topic	#	Item	Location reported			
TITLE			reported			
Title	1 1	Identify the report as an overview of reviews.				
ABSTRACT	1 -	I dentify the report as an overview of ferriews.				
Abstract	2	Provide a comprehensive and accurate summary of the purpose, methods, and results of the overview of reviews.				
INTRODUCTION	1					
Rationale	3	Describe the rationale for conducting the overview of reviews in the context of existing knowledge.				
Objectives	4	Provide an explicit statement of the objective(s) or question(s) addressed by the overview of reviews.				
METHODS						
Eligibility criteria	5a	Specify the inclusion and exclusion criteria for the overview of reviews. If supplemental primary studies were included, this should be stated, with a rationale.				
	5b	Specify the definition of 'systematic review' as used in the inclusion criteria for the overview of reviews.				
Information sources	6	Specify all databases, registers, websites, organizations, reference lists, and other sources searched or consulted to identify systematic reviews and supplemental primary studies (if included).				
Search strategy	7	Specify the date when each source was last searched or consulted. Present the full search strategies for all databases, registers and websites, such that they could be reproduced. Describe any search filters and limits applied.				
Selection process	8a	Describe the methods used to decide whether a systematic review or supplemental primary study (if included) met the inclusion criteria of the overview of reviews.				
	8b	Describe how overlap in the populations, interventions, comparators, and/or outcomes of systematic reviews was identified and managed during study selection.				
Data collection	9a	Describe the methods used to collect data from reports.				
process	9b	If applicable, describe the methods used to identify and manage primary study overlap at the level of the comparison and outcome during data collection. For each outcome, specify the method used to illustrate and/or quantify the degree of primary study overlap across systematic reviews.				
	9c	If applicable, specify the methods used to manage discrepant data across systematic reviews during data collection.				
Data items	10	List and define all variables and outcomes for which data were sought. Describe any assumptions made and/or measures taken to identify and clarify missing or unclear information.				
Risk of bias assessment	11a	Describe the methods used to <u>assess</u> risk of bias or methodological quality of the included systematic reviews.				
	11b	Describe the methods used to <u>collect</u> data on (from the systematic reviews) and/or <u>assess</u> the risk of bias of the primary studies included in the systematic reviews. Provide a justification for instances where flawed, incomplete, or missing assessments are identified but not re-assessed. Describe the methods used to <u>assess</u> the risk of bias of supplemental primary studies (if included).				
Synthesis methods	12a	Describe the methods used to <u>assess</u> the risk of bias of supplemental primary studies (if included). Describe the methods used to summarize or synthesize results and provide a rationale for the choice(s).				
	12b 12c	Describe any methods used to explore possible causes of heterogeneity among results. Describe any sensitivity analyses conducted to assess the robustness of the synthesized results.				
Reporting bias assessment	13	Describe the methods used to <u>collect</u> data on (from the systematic reviews) and/or <u>assess</u> the risk of bias due to missing results in a summary or synthesis (arising from reporting biases at the levels of the systematic reviews, primary studies, and supplemental primary studies, if included).				
Certainty assessment	14	Describe the methods used to <i>collect</i> data on (from the systematic reviews) and/or <i>assess</i> certainty (or confidence) in the body of evidence for an outcome.				
RESULTS						
Systematic review and supplemental	15a	Describe the results of the search and selection process, including the number of records screened, assessed for eligibility, and included in the overview of reviews, ideally with a flow diagram.				
primary study selection	15b	Provide a list of studies that might appear to meet the inclusion criteria, but were excluded, with the main reason for exclusion.				

Characteristics of systematic reviews and supplemental primary study (if included) and present its systematic reviews and supplemental primary studies (if included) and present its supplemental primary studies (if included) and present its supplemental primary studies (if included) and present its systematic reviews and supplemental primary studies (if included) included in systematic reviews. Present assessments of risk of bias or methodological quality for each included systematic reviews.	Section Topic	#	Item	Location reported
