# Many initiatives, limited governance: Is global capacity to manage outbreaks improving?

Jennifer Leigh, Gabrielle Fitzgerald, Elvis Garcia, and Suerie Moon

---

This month marks four years since the first Ebola cases were confirmed in Guinea, and this year, a century since the Spanish flu pandemic that killed more people than the First World War. Over the past few decades, we have seen a cycle of urgency, then neglect, following major disease outbreaks. After each, panels and commissions make recommendations to ensure the world is better prepared. The aftermath of the 2013-2016 West Africa Ebola epidemic resulted in more than 40 reports reviewing what went wrong and how outbreaks could be better managed.<sup>1</sup> In January 2017, we offered an analysis of seven major post-Ebola reports,<sup>2-10</sup> identified areas of consensus, assessed what progress had been made, and highlighted gaps, concluding that the world remained unprepared for major outbreaks.<sup>11</sup>

Given the steady stream of disease events, increasing outbreak management capacity remains an important goal. In 2017 alone, there were outbreaks of plague, diphtheria, yellow fever, Marburg, dengue, chikungunya, cholera, H7N9 flu, MERS, Ebola, Lassa, Zika, hepatitis E, and meningitis.<sup>12</sup> Most of these were nationally contained. While this may suggest solid response capacity, we have not yet seen a major stress test of the global system. Here, we assess progress made in each of the gap areas identified in 2017. We based our analysis on a review of published documents and were informed by informal conversations with key experts; the conclusions remain our own.

## *National health systems capacity*

National capacity to manage outbreaks was reiterated as a priority following Ebola. As an important first step, by the end of 2017 66 countries completed a Joint External Evaluation (JEE), an assessment of country capacity to prevent, detect, and respond to public health risks.<sup>13</sup> The World Health Organization's (WHO) Health Emergencies Programme (WHE) has supported 39 countries to improve their preparedness, prioritizing fragile states.<sup>14</sup> The Global Health Security Agenda (GHSA), with 61 participating countries, has been an important driver for building national preparedness, including a \$1 billion US government investment.<sup>15</sup> In addition to several regional initiatives, the World Bank committed to support at least 25 countries to develop and implement pandemic preparedness plans.<sup>16</sup>

Surveillance initiatives are working to increase capacity to detect and report outbreaks and promote information exchange.<sup>17-25</sup> There have been advancements in risk-mapping and modeling, which can help pinpoint priorities for capacity building.<sup>26-28</sup> Several new initiatives focus on ensuring that communities partner closely with response efforts, in accordance with widespread recognition that community engagement played a major role in containing Ebola.<sup>29-31</sup>

1  
2  
3 Despite these efforts, and the development of several tools to calculate the cost of building country  
4 capacities,<sup>32,33</sup> inadequate funding remains a major barrier to increasing national preparedness. Few  
5 full-scale national action plans have been developed, funded, or implemented. Questions also  
6 remain on whether and how outbreak capacity building efforts and universal health coverage can  
7 concretely complement each other.  
8  
9

### 10 11 *World Health Organization*

12  
13 WHO seems much better prepared for outbreaks after heavy criticism of its Ebola response.  
14 Significant emphasis has been put on strengthening its operational capacity through the WHE,  
15 whose leadership is highly regarded. The WHE has re-built the organization's technical capacities  
16 and investigates 30 events each month.<sup>14</sup> However, the WHE is seen as an operational island within  
17 a non-operational organization.  
18  
19

20  
21 WHO's new Director-General as of 2017, Dr. Tedros Ghebreyesus, has brought high-level political  
22 engagement to WHO's outbreak response, which also features centrally in the organization's next  
23 five-year plan.<sup>34</sup> Dr. Tedros has stated an intent to transform the WHO, focusing on impact and  
24 accountability, and overhauling core business processes.<sup>35</sup>  
25

26  
27 However, the sustainability of reform efforts is at risk due to unstable and inadequate funding for  
28 both outbreaks and WHO more broadly. Perennial questions persist about the working relationship  
29 between headquarters and regional and country offices, coordination with other United Nations  
30 (UN) agencies, and managing sensitive political relationships with outbreak-affected Member  
31 States. Given the recent leadership transition and nascency of the WHE, the jury is still out on  
32 whether WHO's progress to date is adequate for a major global outbreak.  
33  
34

### 35 36 *Research & development of health technologies*

37  
38 Research and development (R&D) of technologies for outbreaks has received extensive attention.  
39 WHO's R&D Blueprint is the main source of global guidance for epidemic R&D, including ten  
40 prioritized pathogens, with roadmaps and target product profiles for each.<sup>36</sup> The Global Research  
41 Collaboration for Infectious Disease Preparedness (GloPID-R) is working to set a research agenda  
42 and address scientific, legal, ethical, and financial challenges, to facilitate an effective research  
43 response within 48 hours of an outbreak.<sup>37</sup>  
44  
45

46  
47 Vaccine development has emerged as a clear priority. The new Coalition for Epidemic Preparedness  
48 Innovations (CEPI) began funding vaccine projects in 2017.<sup>38</sup> While many are enthusiastic about the  
49 rapid pace with which CEPI was developed and launched, concerns persist about what will be  
50 required to keep major vaccine producers engaged and the appropriateness of CEPI's priorities  
51 (MERS, Lassa, and Nipah viruses<sup>39</sup>).  
52

53  
54 Four years on, momentum has been lost on Ebola vaccines. Despite several promising candidates,<sup>40-</sup>  
55 <sup>42</sup> decreasing private sector interest and infeasibility of Phase III trials raises doubts regarding  
56 regulatory approval, and whether Ebola vaccines will be manufactured, affordable, or stockpiled,  
57  
58

1  
2  
3 and ultimately used by directly-affected populations. Similar questions arise regarding a Zika  
4 vaccine.  
5

6  
7 Therapeutics, diagnostics, and non-biomedical interventions have received far less attention and  
8 public financing. In June 2017, CEPI and the Foundation for Innovative New Diagnostics launched  
9 CEPIdx to address barriers to the development and uptake of diagnostics for outbreaks.<sup>43</sup> Despite  
10 this start, more action and funding are needed for these critical technologies.  
11

### 12 13 14 *Knowledge sharing* 15

16 Sharing knowledge and data on outbreaks is critical, yet there are no overarching frameworks for  
17 knowledge sharing across priority pathogens. Nevertheless, there has been a proliferation of  
18 pathogen-specific platforms to facilitate the free exchange of epidemiological and research data.<sup>44-</sup>

19 <sup>49</sup> It is too early, however, to assess how widely these platforms are being used, their impact, or  
20 whether they are sufficient. WHO<sup>50</sup> and GloPID-R<sup>51</sup> are working to address the many inherent  
21 challenges, including a lack of incentives and inadequate infrastructure. Complex regulatory, legal,  
22 and ethical questions also remain. Despite significant political attention to influenza virus-sharing,  
23 ensuring that all relevant pathogen samples (or genomic sequencing data) and resulting benefits  
24 are shared between countries also remains challenging. There are no clear governing frameworks to  
25 facilitate such sharing (beyond influenza), and limited information on actual sharing practices.  
26  
27  
28  
29

### 30 *Travel & trade restrictions* 31

32 Restrictions on travel and trade can deepen and lengthen outbreak-related crises.<sup>52</sup> Minimizing such  
33 restrictions is critical for public health, humanitarian, political and economic reasons. However,  
34 there is no governing framework covering the wide range of relevant public and private  
35 stakeholders. Norms and reasonable expectations for private firms during outbreaks remain  
36 undefined.  
37  
38

39 The WHO has strengthened monitoring of trade and travel restrictions, and Chatham House and the  
40 Graduate Institute developed a set of indicators to monitor travel and tourism reactions.<sup>52</sup> The  
41 World Economic Forum's Epidemics Readiness Accelerator is working to improve coordination and  
42 communications between the public and private sectors to minimize disruptions to travel and  
43 trade.<sup>53</sup> However, further research is still needed to better understand their causes and impacts, as  
44 well as greater political engagement to strengthen accountability for their negative consequences.  
45  
46  
47  
48

### 49 *The humanitarian aid system* 50

51 When outbreaks overwhelm the capacities of health actors or develop into complex emergencies,  
52 the broader humanitarian aid system becomes critical. Post-Ebola reviews highlighted the  
53 importance of strengthening the humanitarian sector's outbreak response capacity and  
54 coordination.  
55  
56  
57

1  
2  
3 Efforts to improve coordination include the WHO's revised Emergency Response Framework to  
4 improve processes for coordination on health threats.<sup>54</sup> The UN's main humanitarian coordination  
5 body, the Inter-Agency Standing Committee, released and tested a new protocol for serious  
6 outbreaks.<sup>55</sup> Several other preparedness and response simulations were also conducted in 2017 by  
7 the World Economic Forum, the G20 and the World Bank/IMF.<sup>30,56-58</sup> However, addressing  
8 outbreaks in conflict settings remains a major political and operational challenge due to security  
9 concerns, restricted access, and a limited number of actors with capacity to do so. Furthermore, the  
10 international aid system is already under heavy strain, with multiple ongoing complex emergencies  
11 that require resources that might otherwise go to reform.  
12  
13  
14  
15

### 16 *Financing*

17  
18 International financing for outbreak management has started to flow. The World Bank has several  
19 channels for financing health crises response, including loans, insurance, and cash  
20 disbursements.<sup>59,60</sup> The philanthropic sector has been an important contributor to new initiatives  
21 including CEPI. The WHO's new Contingency Fund for Emergencies (CFE) has made 44 emergency  
22 allocations totaling \$34m, with more than 80% released within 24 hours.<sup>61</sup> However, the CFE  
23 received less than half its \$100 million goal and is quickly being spent down. GHSA, another  
24 important hub of funding, was recently renewed through 2024,<sup>62</sup> but the US, its largest funder, has  
25 not made any financial commitments beyond 2019. The announcement of deep cuts to the US  
26 Centers for Disease Control and Prevention's global outbreak prevention work raises doubts about  
27 future US financial support.<sup>63</sup> The fate of the G7's 2016 capacity building funding pledge to 76  
28 countries remains unclear, as no follow-up has been announced.<sup>64</sup>  
29  
30  
31

32 Despite significant investments, only a fraction of required funding seems to have been mobilized.  
33 An estimated \$4.5 billion is needed annually.<sup>7</sup> In addition, detailed tracking of financing is extremely  
34 difficult. No aggregate estimates are available of global investment in outbreak management, and  
35 data on national investments is especially difficult to find. Without such information, it is impossible  
36 to track whether global financing is increasing or decreasing over time, or to estimate the financing  
37 gap.  
38  
39  
40

### 41 *Leadership & Monitoring*

42  
43 While political attention to outbreaks skyrocketed immediately following the West Africa Ebola  
44 crisis, the past year has seen a comparative decline. Despite this drop, many actors demonstrated  
45 leadership by taking the initiative to strengthen various aspects of global outbreak capacity – these  
46 include governments, multilateral organizations, foundations, NGOs, companies, and researchers.  
47 As a result, many global initiatives are being implemented. However, amidst a proliferation of  
48 activities, there is no governing framework to ensure that efforts sum up to a functional, adequate  
49 global system.  
50  
51  
52

53 Post-Ebola reviews emphasized the importance of system-wide leadership extending beyond the  
54 health sector. With a new UN Secretary General (UNSG) having taken the helm in 2017, however, it  
55 remains unclear what kind of leadership the UN will provide. Since the UNSG's Global Health Crises  
56  
57

1  
2  
3 Task Force concluded in mid-2017, the UN has not announced any follow-up entities.<sup>30</sup> There is no  
4 global monitoring mechanism, and an inability to meaningfully assess the state of global capacity.  
5  
6

### 7 8 *Conclusions*

9  
10 Many new initiatives have been undertaken to improve global capacity to manage outbreaks. The  
11 multiplicity of projects is encouraging, but raises broader questions about fragmentation,  
12 coordination, and adequate financing.  
13

14  
15 We believe that attention is needed in three priority areas:  
16

17 **Funding** - Significant investments are needed to strengthen outbreak management capacity, but  
18 thus far only a small fraction of required funding seems to have been committed at national or  
19 international levels. The large number of initiatives, the scope of funding required, and decreasing  
20 political attention have all contributed to this gap. In order to achieve adequate progress, more  
21 funding, and better tracking and coordination of those funds are required.  
22  
23

24 **Monitoring** - It is difficult to meaningfully assess the overall level of global capacity to manage  
25 outbreaks. Doing so requires in-depth investigation of implementation efforts and specialized  
26 expertise. An independent global monitoring mechanism is needed to conduct regular in-depth,  
27 system-wide tracking and assessment of efforts. Multilateral discussions regarding such a  
28 mechanism have been ongoing for over two years, but thus far no such entity has been created.  
29  
30

31 **Leadership** – Leadership and a clear governing framework are needed to ensure that efforts are  
32 coherent and sum up to a functional, adequate global system. In the absence of overarching  
33 stewardship, efforts are being made initiative by initiative and pathogen by pathogen. While the  
34 WHO can govern some areas, the overall system requires broader stewardship as the actors and  
35 issues extend beyond the health sector. We believe this role is best played by the UN. Without  
36 adequate leadership, momentum cannot be sustained, and the world will fall short of what is  
37 required to manage a major outbreak.  
38  
39

40  
41 Overall, it is unclear how much better prepared the global system is today for a major outbreak  
42 than it was a few years ago. The evidence suggests that efforts have not progressed far enough, fast  
43 enough, or with enough financing.

**Table 1: An overview of major initiatives to increase global capacity to manage outbreaks**

Initiatives are presented in alphabetical order, by sector. While we tried to identify key activities in each area, the surge of new initiatives means that we cannot guarantee that all were included.

Sector	Initiative
National health systems capacity	<ul style="list-style-type: none"> <li data-bbox="391 415 1520 520">▪ Africa Center for Disease Control Launched in 2017, to strengthen surveillance systems, laboratory systems, emergency preparedness and response, and public health research.<sup>65</sup></li> <li data-bbox="391 537 1520 604">▪ Global Health Security Agenda (GHSa) 61 participant countries, extended through 2024, funding unclear after 2019.<sup>15,62</sup></li> <li data-bbox="391 621 1520 688">▪ IHR Costing Tool, Georgetown University Help countries calculate the cost of developing the required health capacities.<sup>32</sup></li> <li data-bbox="391 705 1520 772">▪ Joint External Evaluations (JEE) Incubated by GHSa, now led by WHO; 66 completed, 27 scheduled for 2018.<sup>13</sup></li> <li data-bbox="391 789 1520 856">▪ Resolve To Prevent Epidemics Aims to catalyze technical assistance and funding to help health capacity planning.<sup>66</sup></li> <li data-bbox="391 873 1520 940">▪ World Bank Health Security Financing Assessment Tool Assists countries in understanding current expenditure and estimate financing gaps.<sup>33</sup></li> <li data-bbox="391 957 1520 1062">▪ The World Bank Group Through IDA provides loans and grants to develop pandemic preparedness, governance mechanisms, and implementation.<sup>16</sup></li> <li data-bbox="391 1079 1520 1184">▪ World Health Organization Health Emergencies Programme (WHE) Provides support for national level risk assessment, epidemic prevention and control, IHR assessment and capacities strengthening, and health systems strengthening.<sup>14</sup></li> <li data-bbox="391 1201 1520 1860">▪ SURVEILLANCE <ul style="list-style-type: none"> <li data-bbox="488 1268 1520 1373">○ Child Health And Mortality Prevention Surveillance Network (CHAMPS): By The Gates Foundation, collects and shares data on under five morbidity and mortality from sites in Africa and South Asia.<sup>17</sup></li> <li data-bbox="488 1390 1520 1457">○ Connecting Organizations For Global Disease Surveillance (CORDS): Information exchange between surveillance systems globally.<sup>18</sup></li> <li data-bbox="488 1474 1520 1541">○ DiSARM, by UCSF's Global Health Group: A spatial intelligence tool, built to enable disease prediction and control programs to deliver more effective field campaigns.<sup>19</sup></li> <li data-bbox="488 1558 1520 1583">○ Doctor Me App: Thai app uses digital volunteerism to identify potential outbreaks<sup>20</sup></li> <li data-bbox="488 1600 1520 1705">○ eBarometer: Building off of Dengue Track, Harvard Medical School, Boston Children's Hospital, and The Synergist are developing a tool to bundle data from public and private sources, including crowd surveillance.<sup>21</sup></li> <li data-bbox="488 1722 1520 1789">○ Ending Pandemics: Started by Skoll Global Threats Fund, a group of companies and philanthropies aiming to detect, verify and report outbreaks more rapidly.<sup>22</sup></li> <li data-bbox="488 1806 1520 1860">○ EpiHack: Tool to bring together professionals to improve surveillance through existing or prototype technologies.<sup>23</sup></li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>○ Global Virome Project: Aims to detect and sequence DNA for viruses present in wildlife<sup>24</sup></li> <li>○ PREDICT: Surveils zoonotic viruses to identify potential outbreaks<sup>25</sup></li> <li>▪ <b>RISK MAPPING AND MODELING</b> <ul style="list-style-type: none"> <li>○ Corporate Infectious Disease Risk Dashboard: On development by the WEF to enable visualization estimates of cost associated with infectious disease outbreaks.<sup>26</sup></li> <li>○ IHME: Conducted a study to aid in identifying priorities for outbreak mitigation and prevention.<sup>27</sup></li> <li>○ Models Of Infectious Disease Agent Study (MIDAS): Proposes advanced predictive modeling for infectious disease threats.<sup>28</sup></li> </ul> </li> <li>▪ <b>NON-CLINICAL OUTBREAK RESPONSE TECHNOLOGIES</b> <ul style="list-style-type: none"> <li>○ Communication And Community Engagement Initiative: lead by UNICEF, addresses the need for more systematic approaches in this area.<sup>29</sup></li> <li>○ Good Community Engagement Practices, by the WHO R&amp;D Blueprint guide for conducting clinical research in emergencies.<sup>31</sup></li> <li>○ Grand Challenge Competition to identify a better Personal Protective Equipment (PPE) resulted in new prototype by Johns Hopkins University.<sup>67</sup></li> </ul> </li> </ul>
World Health Organization	<ul style="list-style-type: none"> <li>▪ <b>2019-2023 General Programme of Work</b> Identifies health emergencies, including outbreaks, as one of three strategic priorities.<sup>34</sup></li> <li>▪ <b>Contingency Fund for Emergencies (CFE)</b> Has made 44 emergency allocations totaling \$34m, more than 80% of allocations released within 24 hours. Budget depleting rapidly; only \$44.5m received of \$100m target.<sup>61</sup></li> <li>▪ <b>Emergency Response Framework</b> 2nd edition released in April 2017; processes for coordinating information on health threats.<sup>54</sup></li> <li>▪ <b>Health Emergencies Programme (WHE)</b> Established in 2016, investigates 30 events per month.<sup>14</sup></li> <li>▪ <b>Joint External Evaluations (JEE)</b> Incubated by GHSA, now led by WHO; 66 completed, 27 scheduled for 2018.<sup>13</sup></li> <li>▪ <b>Outbreak Crisis Response</b> Had 27% gap at end of 2017, \$780m out of the \$1,073m proposed budget.<sup>68</sup></li> <li>▪ <b>Research &amp; Development Blueprint</b> Main source of global guidance for epidemic preparedness R&amp;D.<sup>36</sup></li> <li>▪ <b>Simulation Exercise Manual</b> Provide guidance on planning, conducting and evaluating simulation exercises for outbreaks and public health emergency preparedness and response.<sup>56</sup></li> <li>▪ <b>ZIKA Open</b> Space within the Bulletin of the World Health Organization, where experts can share their data, which is freely available for unrestricted use.<sup>49</sup></li> </ul>

<p>1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33</p> <p>Research &amp; development of health technologies</p>	<ul style="list-style-type: none"> <li>▪ <b>Global Coordination Mechanism (GCM)</b> Under the Blueprint, builds a framework to address global R&amp;D challenges during epidemics. Held first meeting in March 2017.<sup>69</sup></li> <li>▪ <b>Global Research Collaboration For Infectious Disease Preparedness (GloPID-R)</b> Facilitates effective research response within 48h of an outbreak.<sup>37</sup></li> <li>▪ <b>WHO R&amp;D Blueprint</b> Main source of global guidance for epidemic preparedness and R&amp;D.<sup>36</sup></li> <li>▪ <b>VACCINES</b> <ul style="list-style-type: none"> <li>○ CEPI: Began funding projects in 2017. Initially targeting MERS-CoV, Lassa, and Nipah viruses.<sup>38,39</sup></li> <li>○ EBOLA: Merck's Ebola Zaire candidate successful, but unlikely to receive FDA approval.<sup>40</sup> GlaxoSmithKline also has Ebola Zaire candidate and is researching candidates for Marburg and Ebola Sudan.<sup>41</sup> Johnson &amp; Johnson/Janssen Vaccine's candidate yields durable immune response.<sup>42</sup> China and Russia have licensed Ebola vaccines although little data has been shared.<sup>70</sup></li> <li>○ ZIKA: Sanofi Pasteur pulled out in september 2017 due to limited funding, low market prospects, and complications in development.<sup>70</sup> USG funding went to Takeda candidate.<sup>71</sup></li> </ul> </li> <li>▪ <b>DIAGNOSTICS</b> <ul style="list-style-type: none"> <li>○ CEPIdx: partnership between CEPI and the Foundation for Innovative New Diagnostics (FIND) to strengthen global diagnostic preparedness.<sup>43</sup></li> <li>○ More than a dozen diagnostic tools available to detect Ebola.<sup>36</sup></li> <li>○ New affordable and simple blood test to distinguish between Zika and Dengue.<sup>72</sup></li> </ul> </li> </ul>
