

**Additional table: Differences in mean BMI-, weight- and length-for-age z-scores at 24 months in study of effect of home based early intervention in children**

	Mean (SD)		Intervention–control (95% CI)	P value <sup>#</sup>
	Intervention	Control		
<i>Complete cases analysis (n=249 in intervention, 234 in control)*</i>				
BMI-for-age z-score	0.55 (1.19)	0.85 (1.07)	–0.29 (–0.50 to –0.09)	0.005
Weight-for-age z-score	0.68 (1.02)	0.82 (0.95)	–0.14 (–0.31 to 0.04)	0.12
Length-for-age z-score	0.48 (1.15)	0.38 (1.13)	0.10 (–0.10 to 0.31)	0.33

\*14 missing weight or length values among 497 remaining at 24 months.
