1	Question 5e is unclear. I have answered how often I did a psych referral ever but i wonder if you meant how often did I refer when the guidelines suggested I should in which case the answer is 'always'	6/5/2014 8:20 AM
2	Dementia screening should be done in the community in the patient own environment rather than in hospital , most elderly patients are confused when they unwell. Screening patients for dementia on discharge will delay discharge. Specialist nurses should assigned to do this jobs in the community.	5/14/2014 11:39 AM
3	i refer to old age psychiatry during admission not on disharge	5/13/2014 5:23 AM
4	It is really useful to have AMTS documented on old discharge summaries when patients present with confusion as it gives you a previous result for the patient. More useful would be a discharge AMTS as this would give a baseline that we not be affected by their acute illness at the beginning of admission.	5/13/2014 2:03 AM
5	It is not that useful having them on the EDN, because by then it is too late to do much about it. In my opinion it is better having it clearly in the clerking documents and encouraging clerking staff to fill it out properly.	5/12/2014 9:49 AM
